DCS TIU and WIU Discontinued, Replaced With All-New DCS WTIU WiFi Track Interface Unit

September 30, 2020 - M.T.H. Electric Trains has discontinued its [50-1003](#) DCS TIU Track Interface Device and [50-1036](#) DCS WIU WiFi Interface Unit. Both items will be replaced with the all-new DCS WTIU WiFi Track Interface Unit. The WTIU is expected to ship during the second quarter of 2021 and can be ordered now. The last of the TIU and WIU models shipped out this September. None remain in-stock.

One Gauge Items Just Released During The Week Of September 20, 2020

September 30, 2020 - To review last week's list of the One Gauge items M.T.H. Electric Trains released during the week of September 20, 2020, click [HERE](#). You'll find these at your local [M.T.H. Authorized Retailer](#) or directly from the M.T.H. online store.

As always, you can stay apprised of the latest shipping dates by checking the [M.T.H. Shipping Schedule](#). Once items have shipped, use the [M.T.H. Product Locator](#) to find a retailer reporting the item in stock.

2019 - 2020 RailKing One Gauge G Scale

The DCS WiFi Track Interface Unit combines a wifi module and a track interface unit into one unit. Featuring four channels, the new WTIU can now control conventional **DC and AC powered locomotives** by varying either power input type to the track. This new configuration now allows the user to control Proto-Sound command and non-command equipped locomotives on the same track at the same time regardless of their power source. The discontinued TIU could only vary AC power out to the track, limiting its compatibility to AC powered locomotives only. With the all-new WTIU, users can now control conventional HO and G Gauge locomotives using any Android or Apple smart device and the DCS App.

The WTIU sets up in seconds and doesn't require a home WiFi system to operate. It can control accessories and switches when connected to the separately sold AIU Accessory Interface Unit and can receive commands from an unlimited number of smart devices.

NOTABLE FEATURES

- Requires an iOS or Android Smart Device + the DCS App
- Broadcasts Its Own WiFi Signal - No Home WiFi Needed
- 4 Input/Output Channels (Requires Separately Sold AC or DC Power Supplies)
- Variable Channels Output AC or DC Power
- **Does not Support Existing [50-1002](#) or [50-1038](#) DCS Remote Control Handheld Units**

One More DCS Handheld Remote Control Production Scheduled: The final production run of the [50-1038](#) DCS Remote Control Handheld is slated for this winter with availability slated for the second quarter of 2021. ***The remote will be discontinued after this production run.*** In addition, users should be reminded that current and past DCS Remote Handheld units will NOT function with the new DCS WTIU Track Interface Unit as the WTIU is strictly a wifi system and cannot communicate with the 900mhz radio in the DCS Remote Handheld.

DCS AIU Accessory Interface Unit Production Scheduled: The next production run of the [50-1004](#) DCS AIU Accessory Interface Unit is slated for this winter with availability slated for the second quarter of 2021. The AIU is the perfect add-on to the DCS Command System for users that want to incorporate full control over their model railroad. The AIU can control switches, accessories - basically, anything controlled by a switch can be
