# **CE0030B**

### **■ INTRODUCTION**

The CE0030B is a fully differential audio power amplifier designed for portable communication device applications. It is capable of delivering 1 watt of continuous average power to an  $8\Omega$  BTL load with less than 1% distortion (THD+N) from 5V battery voltage. It operates from 2.2 to 6.8V. Features like 83dB PSRR at 217Hz. improved RF-rectification immunity, the space-saving 8-pin MSOP8 and SOP8 package, the advanced pop & click circuitry, a minimal of external components low-power shutdown mode make CE0030B ideal for wireless handsets. The CE0030B is unity-gain stable, and the gain can be configured by external input resistors and internal feedback resistors.
