

Framing Your D-145 Dealer Mural

From our research Lionel originally mounted these silk screened poster to masonite and then framed them with a simple wooden frame.

You can mount this poster to masonite, foam board, or any other hard surface if you wish. If you want to mount the poster permanently to masonite or other hard surface we recommend an artist spray mount adhesive such as 3M Spray Mount for Artist

The few examples that we have seen of the D-145 do have a simple wooden frame around the edge of the poster. These frames were built with 1x2 boards and had the inner edge routed at an angle. The corners of the frame were joined at a 45 degree angle. Please see the photo below to see what one example of original framing looks like. We have also attached a sketch of what we believe the profile of the board should look like.

For painting the frame, we have found that the closest paint is Sherwin Williams color SW7065.

One final note, while your print is printed on high quality paper and with quality ink, our printer has recommended that these posters not be mounted in direct sunlight. Feel free to contact us if you have any other questions.
