Jr Junction Train & Hobby is proud to announce their second "O" scale New York Ontario & Western custom run by Weaver Models. Made by the American Car & Foundry in 1911 and 1916, the New York Ontario & Western purchased 200 Composite Wood & Steel Gondola's numbered 6200-6399. As built, these cars had drop bottoms and ends; however by the 1940's the railroad had converted all of them to fixed bottoms. These cars were very successful for the railroad surviving in use right up to 1957.

We are proud to be the exclusive source for these in "O" scale. These cars will be produced in 6-car sets featuring 6 different road numbers. A limited number of single cars will also be available.
