## eTrain Command Console (L)

eTrain Command Console (L) is a Windows-based software program that works with LCS. Developed by LCS partner Harvy Ackermans, this great program is loaded with Legacy features for controlling locomotives and building lash-ups, as well as providing specific support for Crane Cars, Station Sounds Diners, Vision Tank Cars and more. It also operates switches and routes. And the program's unique "scenario" feature lets you record a series of commands from any Lionel CAB remote or the eTrain program, then playback these scenarios at any time. eTrain Command Console (L) uses a wired serial-port connection from your Windows PC to the SER2 or WiFi!

For the most up to date info and to purchase eTrain Console(L)

Also available is the optional companion eTrain Command Mobile, an Android App which works in conjunction with the copy of eTrain Command Console (L) running on your PC. Using this app, you can control TMCC and Legacy engines, switches and accessories wirelessly from your Android phone or tablet. Uses your existing home WiFi network, LCS WiFi not supported.
