

# NORTHERN MICHIGAN RAILROAD CLUB

Accepting Orders for our 9th Club Car

## LAKE SUPERIOR AND ISHPEMING RAILROAD 40' 1937 AAR Standard Design Single Door Box Car

The Lake Superior & Ishpeming Railroad boxcars we have chosen for this year's Club Cars were in use from the 1940s to the 1970s era. In 1951 the LS&I operated 102 miles of main line and 55 miles of branch lines. The primary business was transporting iron ore from the many mines located in the Marquette Iron Range area and timber related operations in the Munising region. During this era the Lake Superior & Ishpeming Railroad was one of a very few Class One railways that was completely free of debt with it's capitalization consisting solely of common stock, with 75% of the outstanding common stock own by the Cleveland - Cliffs Iron Company.

Today the Lake Superior and Ishpeming Railroad primarily transports taconite (processed iron ore) pellets from the Tilden Mine located south of Ishpeming to a ore boat loading dock on Presque Isle north of Marquette. The LS&I also interchanges ore cars with Canadian National Railway for shipping from the Port of Escanaba. The Lake Superior and Ishpeming Railroad operates as an independent railroad with sixteen miles of mainline trackage and is completely owned by Cliffs Natural Resources.
